

About ENS

Engineered Network Systems is a design, engineering and manufacturing company specializing in pivots, desks, mobile carts, shelves, kiosks, brackets and problem solving. We specialize in meeting the needs of the payment terminal, point of sale and kiosk markets. Whatever your need is, ENS has a cost effective solution that's right for your business.

Pivots

We're all about the details. No metal to metal contact on moving surfaces, cycle testing and the ability for you to set the tilt and swivel tension in the field, makes us the perfect choice. Throw in our low cost and your head will be pivoting. Choose from any number of standard pivots or have us create a solution to meet your specific need.

- Reduces system downtime
- Low cost
- View prototypes prior to production
- Free site evaluations
- Custom designed and manufactured to any dimension
