

ENS Group Environmental Policy

ENS Group is committed to conducting its business in a manner that consistently seeks to minimize the environmental impact of its products and processes.

The company designs, sources and supplies a range of composite, metal and electronic solutions for retail, warehouse and various service sector customers and technology partners. It recognises that its activities have an impact on the environment through using raw materials, waste generation, energy consumption and emissions.

The company's environmental policy commits it to comply with all current and future environmental legislation and regulations and to establish and maintain practices that work to deliver continuous improvement in environmental protection.

Our commitment extends to our customers and employees and the company will seek to work with others in the supply chain that adopt and follow appropriate environmental policies.

The company will seek to:

1. Work, through product design, to minimise raw materials usage and promote recyclability in the products the company offers.
2. Minimize waste and disposal of materials to landfill by reducing packaging and ensuring it can be recycled.
3. Reduce the length of the supply chain and utilise energy efficient and low emission modes of transport.
4. Promote these goals and environmental best practice amongst all staff and empower them to contribute and participate.

Detailed plans are established and maintained around these core areas and are reviewed with the senior management team and company directors on a regular basis and updated to ensure a continuous improvement ethos is instilled throughout the company.

The Directors, management, and staff of ENS Group are educated on this policy statement and are fully committed to its implementation.
